Profile Summary

I am Charles Abraham, a software developer / full-stack developer with experience in web apps, Laravel/PHP, React/Next.js, APIs, IoT, and practical business systems.

I am closely connected with TekQuora, an IT company focused on digital solutions, AI-driven innovation, web/mobile development, IoT, cloud, cybersecurity, and business technology. I work on real-world projects such as LMS platforms, booking systems, admin panels, websites, invoices, dashboards, and permission-based logic.

I am very hands-on in development and troubleshooting. I work with technologies like NodeMCU ESP8266, DS18B20 temperature sensors, 16x2 I2C LCDs, API backends, database storage, React/mobile frontends, PowerShell, local servers, Wi-Fi configuration, Laravel routes, and console debugging.

My work style is practical, direct, and detail-focused. I prefer systems that are production-ready, clean, dynamic, professional, and easy to implement. I focus on building solutions that work properly in real-world use cases, not just on paper.

I also have a strong interest in modern UI/UX design, including premium layouts, futuristic minimal styles, dark mode, smooth animations, glassmorphism, dynamic content, and well-structured admin panels.

Overall, I am a developer-builder who works across software, web platforms, IoT hardware, business websites, automation, and AI-assisted development, with a strong focus on creating real systems that are useful, scalable, and reliable.

Professional Skills

Project Coordination | Client Relationship Management | Python | Automation Testing

Education

Master of Commerce

Madras Christian College - Tambaram

2023 - 2026
